

Exciting Developments in the World of Green Button Presses

How do you best combat these challenges?

AUTOMATION

- Keep your green button presses running to their maximum despite staffing issues. Through automation, one press operator can now run up to 4-5 presses at once.
- Reduce waste and improve profits per jobs. Xerox has an in-line spectrophotometer to adjust quality on the go so there is less waste, thus improving profits.
- Optimize differing engines through rules-based job processing. Route jobs to the best available units to finish the jobs the fastest to allow for more production throughput on the print floor.
- With an optimized print floor, you'll have more time to spend gaining clients.

How Do You Take Your Production Equipment to the Next Level?

ENHANCEMENTS

Predict Print Media Vitals

Through a catalog of hundreds of media stocks, the Xerox Green Button Press streamlines set-up time for jobs.

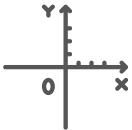

Job Expert

Optimizes PDFs for the best quality on a Xerox Green Button Press.

True Brand Matching

Allows for 100% accurate color matching thus again reducing your set up time and allowing jobs to flow through your operation faster.

Delta E Linearization

Xerox is the ONLY Green Button Press to utilize 3D point X/Y coordinates thus creating a broader spectrum of solids and gradations.

Transform your fleet with vital information that previously wasn't instantly available.

Imagine knowing your entire fleet of Green Button Presses status in real time, across a single site, or across the world. You now have this information on your computer, SMART phone, or SMART watch. This real-time dashboard will help you make informed decisions on which device should be utilized for which job. Don't send a job to the system that will require a fuser kit before the job is complete.

Receive status updates on paper supply, paper stock, consumable life remaining, etc. Stop guessing, and start making quick decisions based on real-time data.

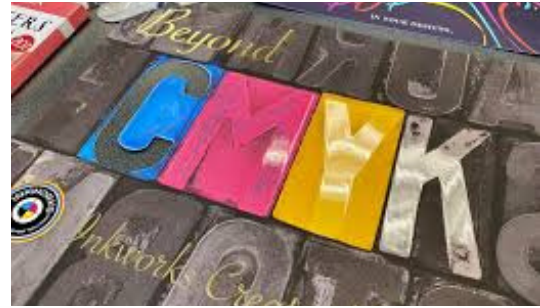

Using this knowledge, a single operator can use multiple devices at once, which will help ease your staffing concerns.

Optimizing your fleet of devices through Predictive Automation and AI.

Green Office Partner has the tools to help you identify your Overall Equipment Effectiveness (OEE) baseline score. Through actionable intelligence, you can make informed decisions that increase your OEE.

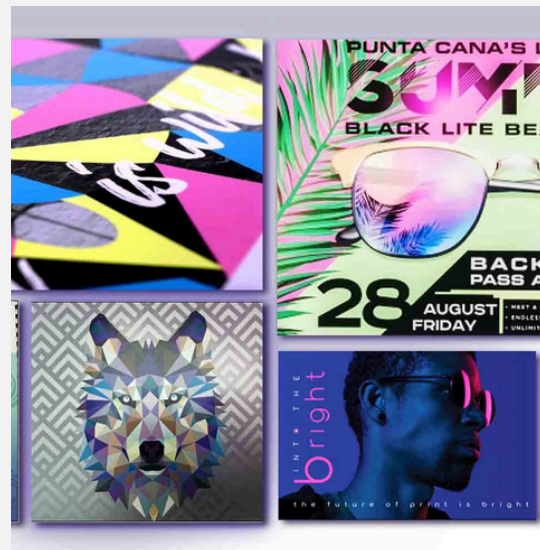

Through Green Office Partner's commitment to Green Button Presses, we can help your operation level-set and design a plan for improvement now and into the future.

How can the use of AI and florescent pink change the world of print?

This technology MUST be seen to be believed!

Through the use of underlayered, or overlaid *fluorescent pink* and Xerox's exclusive gamut extension pages are enhanced so much that this will completely set you apart from your competition. It allows for brighter and truer oranges and flesh tones, and simply makes the page POP!

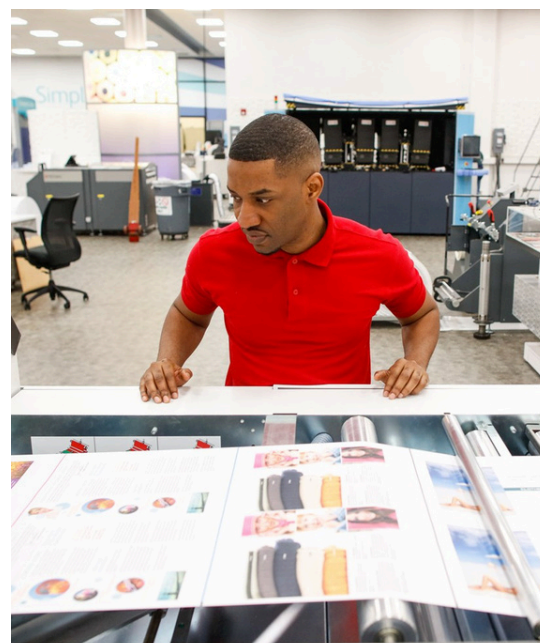

The time is now to talk to Green Office Partner and to see how we can help your operations.

We understand the two most hated sounds in the world of print are a silent print floor and the word "oops".

We can help make your floor run more efficiently and eliminate the word "oops."

The world of production needs to get ready for a new player who uses state-of-the-art tools and analytics to improve your operation, thus allowing you to make more money.

Green Office PARTNER
